PROFESSIONAL SUMMARY

AI Engineer with enterprise experience in building intelligent automation systems using machine learning and generative AI. Skilled in designing multi-agent workflows, integrating LLMs, and deploying scalable solutions on Azure. Currently pursuing an MSc in Data Science with a strong focus on AI engineering, automation, and analytics.

SKILLS

- **Programming:** Python, SQL, Swift, JavaScript (React.js, Node.js), HTML, CSS
 - **GenAI:** OpenAI, Prompt Engineering, Multi-agent workflows and task orchestration, Basic RAG concepts and semantic search
 - **ML:** Scikit-learn, TensorFlow, Pandas, NumPy, Model building, evaluation, and feature engineering
 - **Tools & Platforms:** Azure, VS Code, GitHub, Power Apps, Power Automate, Copilot Studio, Power BI, Excel, Xcode
 - **Soft skills:** Problem Solving, Analytical Thinking, Collaboration, Communication
-

WORK EXPERIENCE

Data Scientist | Emerson, Dubai, U.A.E

SEP 2025 - Present

AI-Driven RFQ Automation

- Designed a multi-agent RFQ analyzer to process complex RFQ documents, Integrated OpenAI GPT models to summarize RFQs and assist in proposal generation by migrating Excel-based estimators to Azure functions.
- Designed structured prompts, reasoning workflows, and guardrails to ensure enterprise compliance
- Reduced processing time from ~2 days to 20 minutes (93% faster)

POR (Presidents Operating Report) Application

- Automated President's Report by integrating CRM data into a centralized platform for sales, orders and yearly forecasts for each region, eliminating Excel-based reporting and enabling real-time insights and historical tracking for leadership.
- Application scaled to be used by 300 of 1800 individuals in the MEA organization, with expected time savings of 3-4 hours per resource per month. ~900-1200 hours of time savings per month.

MRO Configurator

- Created an MRO application tool for Local Business Partners (LBPs) to search parts and products, design and customize Trex models, and generate detailed quotes directly within the same platform.

Data and Automation Intern | Emerson, Dubai, U.A.E

AUG 2024 - AUG 2025

- Developed a complete digital proposal ecosystem a Budgetary Automation Tool and a Microsoft Teams Chatbot using Copilot Studio, Power Apps, Power Automate, and SharePoint reducing proposal creation time by 40%, contributing to over \$3M in revenue.
- Automated daily Esker financial report ingestion (Excel → Power BI pipeline) using Power Automate, and eliminated manual data preparation by enabling real-time daily refresh of reporting dashboards
- Contributed to development of an Innovation Portal to capture and track employee ideas and automation initiatives

Associate Software Engineer | YML (Code and Theory), Bengaluru, India
AUG 2022 - DEC 2023

- Responsible for implementing and enhancing various features of the mobile application. Collaborated with the team to design and develop user-friendly interfaces and functionalities for the iOS app, and analysis on iOS Passkeys for secure authentication solutions.
 - Expanded skills in React, Node.js, and MongoDB, developing Beta-Mart, an e-commerce application.
-

ACHIEVEMENTS

- 1st Place - Enterprise Solutions Track, AGENTVERSE Hackathon 2025 by Fetch.ai, - Awarded for developing a multi-agent autonomous RFQ Analyzer automating RFQ processing using five specialized AI agents.
 - 3rd Place - DeFi Track, AGENTVERSE Hackathon 2025 by Fetch.ai - Developed an intelligent solution leveraging decentralized finance tools using AI.
 - Global Hackathon 3.0 - EMEA Regional Round (Warsaw, Poland) by EMERSON - Won first place for developing an AI-driven proposal-automation solution. Finals (Madrid, Spain) - Represented the region before Emerson global leaders and received the *Best Practical Project* award.
-

PROJECTS

Predictive Modeling of Under-5 Child Mortality (*Masters Final Year Dissertation*)

- Built end-to-end ML pipeline on NFHS health data including data cleaning, feature engineering, and handling missing values; addressed class imbalance using SMOTE (~3.7% minority class)
 - Trained and optimized models (Random Forest, Logistic Regression, XGBoost, KNN) using cross-validation and hyperparameter tuning, improving predictive performance
-

EDUCATION

MSc in Data Science (Part-time) | Heriot-Watt University, Dubai, U.A.E
2024 - 2026 - Distinction

B.E in Information Science | SJB Institute of Technology, Karnataka, India
2018 - 2022 – 8.9 CGPA

CERTIFICATIONS

- Complete Python Bootcamp: From Zero to Hero in Python
 - Artificial Intelligence: Machine Learning (LinkedIn Learning)
 - Data Analysis | SQL, Tableau, Power BI & Excel (Real Projects)
 - MERN Stack Development Bootcamp (2024)
 - iOS and Swift - The Complete iOS App Development Bootcamp (Udemy)
-
